

ISmart GUIDE

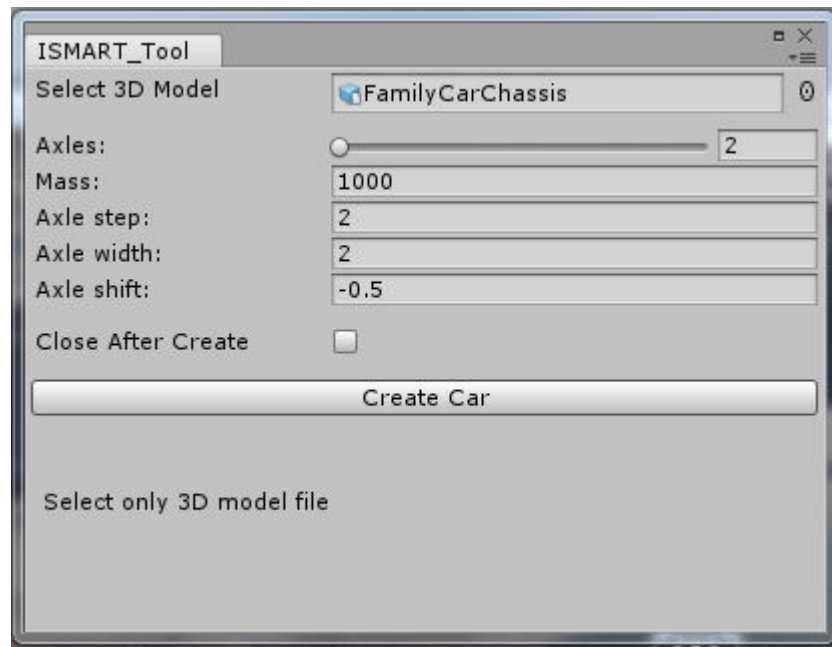

1) Press on **ISmart** Menu and select **Create Car**

2) Select 3D Model from the list

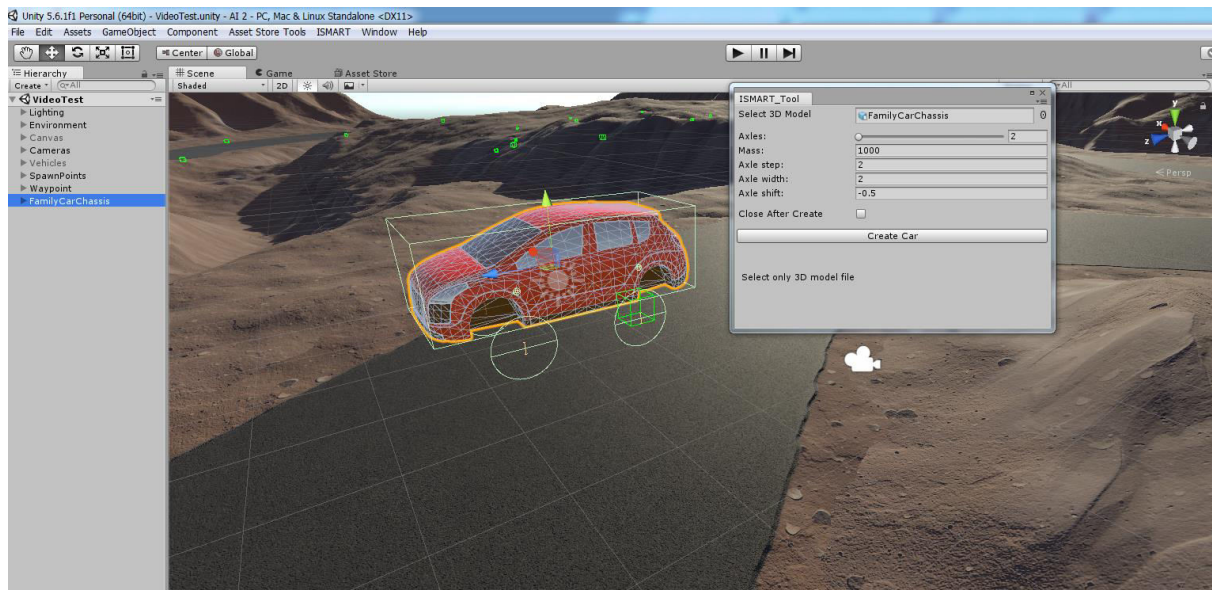

3) Select you setting:

Axes	The number of axles in the car
Mass	The mass of the car
Axle step	The distance between axles
Axle width	The width of the car
Axle shift	The distance axles are offset above the car's center along the local Y axis

4) Press [Create Car](#)

Examining a generated a A.I car

The car generated by the wizard is a fully functional and based on the settings chosen in the wizard.

EasySuspension

EasySuspension

The EasySuspension script is a utility script that updates suspension settings across all child WheelCollider components. Simply enter the mass, natural frequency and damping ratio for the wheels, and the EasySuspension script will take care of updating each WheelCollider component with these settings.

Unless otherwise specified, units of measurement are [SI units](#).

Natural Frequency	<p>The natural frequency of the suspension springs. Natural frequency might be thought of as a mass-independent analogue for stiffness.</p> <p>Typical range [4..20]. A family car might have springs with the natural frequency of about 10.</p>
Damping Ratio	<p>The damping ratio of the suspension springs. This parameter sets how fast the oscillations in the suspension comes to rest.</p> <p>Typical range [0..1]. A family car might have springs with the damping ratio of about 0.8.</p>
Force Shift	<p>The distance to the point where the tyre forces are applied, starting from the center of mass of the vehicle, along the local Y axis.</p>
Set Suspension Distance	<p>Whether or not to adjust the travel distance of the suspension springs. This setting helps to avoid having physically incorrect configurations that still apply force at maximum suspension elongation.</p>

WheelDrive

The WheelDrive component is a minimalistic vehicle controller. This script allows for quick testing out of the box, and provides a good start for your own customized vehicle controller.

Unless otherwise specified, units of measurement are [SI units](#).

ISMArt script

ISMArt (Script)

Script: ISMArt

Car Mode

Car Type: Police

Drive Type: Rear Wheel Drive

Ray Mod: No

Hit Layer: Everything

Parking: ☐

Car Settings

Torque: 300

Max Speed: 100

Max Angle P: 45

Max Angle N: -45

Brake Torque: 5000

► Gear Ratio

Car Info

Speed: 0

Engine RPM: 0

Angle: 0

Current Waypoint: 0

Current Gear: 0

Car Addons

Wheel Shape: None (Game Object)

Find Waypoint: ☐

Waypoints: None (Way Road)

Brake Lights: None (Game Object)

Police Addons

Police Lights: None (Game Object)

Target: None (Game Object)

Chase Range: 25

Car Mode:

Car Type

Normal Car - Traffic car setting with low torque , No Rays sensors.

Sport Car - Sport car setting with high torque , With Rays sensors.

Truck - Traffic truck setting with low torque and with four whells
movment, No Rays sensors.

Police - Police cars setting with high torque with rays sensors and chase
"Enemy" tags.

Custom - select you parameters.

Drive Type

Raer Wheel Drive - Only rear wheels well move by engine.

Front Wheel Drive - Only front wheels well move by engine

All Wheel Drive - All wheels well move by engine

Ray Mod

<input checked="" type="checkbox"/>	No
<input type="checkbox"/>	Yes

With or without rays sensors. (Custom mod only)

Hit Layer

<input type="checkbox"/>	Nothing
<input checked="" type="checkbox"/>	Everything
<input checked="" type="checkbox"/>	Default
<input checked="" type="checkbox"/>	TransparentFX
<input checked="" type="checkbox"/>	Ignore Raycast
<input checked="" type="checkbox"/>	Water
<input checked="" type="checkbox"/>	UI
<input checked="" type="checkbox"/>	Car
<input checked="" type="checkbox"/>	Enemy

Whice layer the rays with sens the hit.

Parking

Parking	<input type="checkbox"/>
---------	--------------------------

If the car on parking mode . (Not move on start)

Car Settings

Car Settings

Torque	<input type="range"/>	300
Max Speed	<input type="range"/>	100
Max Angle P	<input type="range"/>	45
Max Angle N	<input type="range"/>	-45
Brake Torque	<input type="range"/>	5000
▼ Gear Ratio		
Size	<input type="text" value="4"/>	
Element 0	<input type="text" value="1.1"/>	
Element 1	<input type="text" value="1.5"/>	
Element 2	<input type="text" value="1.7"/>	
Element 3	<input type="text" value="1.2"/>	

Torque - The expression of this rotational or twisting force around an axis is called torque.

Max Speed - Limit the speed of the car.

Max Angle P & N - Limit the angle of the wheels turn.

Brake Torque - Set the breake power.

Gear Ratio - Set the numbers of the gear and the time of the gear.

Car Info

Car Info

Speed	<input type="text" value="0"/>
Engine RPM	<input type="range"/> 0
Angle	<input type="text" value="0"/>
Current Waypoint	<input type="text" value="0"/>
Current Gear	<input type="text" value="0"/>

Only information of the car.

Car Addons

Wheel Shape - Select 3D wheel.

Find Wapoint - Find waypoint automatic on the map.

Waypoint - The waypoint that selected.

Brake Lights - The light of the breake gameobject.

Police Addons

Police Lights - The police light gameobject.

Target - must closeset enemy car.

Chase Range - Range of the chase.

Thank you for buying my asset ISMART.
